

IN THE CLAIMS:

1. (currently amended) For use with an automated call placement system having a switching service unit, a call monitoring unit capable of monitoring a selected one of lines coupled to said switching service unit, comprising:

a recorder, coupled to said call monitoring unit, that monitors a call carried on said selected one of said lines and creates a recording of said call on a storage medium associated therewith, said storage medium being of finite capacity thereby causing said recording to be subject to eventual overwriting; and

A2
cont. a recorder controller, coupled to said recorder, that provides an audible reproduction of ~~audibly reproduces~~ said call to a user in real time and allows said user to preserve said recording based on said audible reproduction to delay said overwriting.

2. (original) The system as recited in Claim 1 wherein said recorder controller allows said user to preserve said recording to prevent said overwriting.

3. (currently amended) The system as recited in Claim 1 wherein said recorder monitors said call by tapping a trunk line coupled to said switching service unit ~~is a digital recorder~~.

4. (currently amended) The system as recited in Claim 1 wherein said call is an outgoing call from a station coupled to said switching service unit ~~storage medium comprises a disk~~.

5. (original) The system as recited in Claim 1 wherein said storage medium contains a plurality of recordings arranged in directories according to a date on which said recorder created said plurality of recordings.

6. (original) The system as recited in Claim 1 wherein said recorder controller is an ADSI-capable device.

7. (original) The system as recited in Claim 1 wherein said recording is subject to overwriting on an aged basis.

8. (currently amended) For use with an automated call placement system having a switching service unit, a method of making a recording of a conversation occurring on a selected one of lines coupled to said switching service unit, comprising:

monitoring a call carried on said selected one of said lines;

creating a recording of said call on a storage medium, said storage medium being of finite capacity thereby causing said recording to be subject to eventual overwriting; and

providing an audible reproduction of ~~audibly reproducing~~ said call to a user in real time with a recorder controller; and

allowing said user, with said recorder controller, to preserve said recording based on said audible reproduction to delay said overwriting.

9. (original) The method as recited in Claim 8 wherein said recorder controller allows said user to preserve said recording to prevent said overwriting.

10. (currently amended) The method as recited in Claim 8 wherein said monitoring includes monitoring at a trunk line coupled to said switching service unit ~~recorder is a digital recorder.~~

11. (currently amended) The method as recited in Claim 8 wherein said call is an outgoing call from a station coupled to said switching service unit ~~storage medium comprises a disk.~~

12. (original) The method as recited in Claim 8 wherein said storage medium contains a plurality of recordings arranged in directories according to a date on which said recorder created said plurality of recordings.

13. (original) The method as recited in Claim 8 wherein said recorder controller is an ADSI-capable device.

14. (original) The method as recited in Claim 8 wherein said recording is subject to overwriting on an aged basis.

15. (currently amended) An automated call placement system (ACP), comprising:
a switching service unit;
a plurality of stations coupled to said switching service unit;

a call monitoring unit capable of monitoring a selected one of lines coupled to said switching service unit;

a storage medium associated with said call monitoring unit;

a recorder, coupled to said call monitoring unit, that monitors a call carried on said selected one of said lines and creates a recording of said call on a storage medium, said storage medium being of finite capacity thereby causing said recording to be subject to eventual overwriting; and

a recorder controller, coupled to said recorder, that provides an audible reproduction of ~~audibly reproduces~~ said call to a user in real time and allows said user to preserve said recording based on said audible reproduction to prevent said overwriting.

ADJ
16. (currently amended) The ACP as recited in Claim 15 wherein said recorder monitors said call by tapping a trunk line coupled to said switching service unit ~~is a digital recorder.~~

17. (currently amended) The ACP as recited in Claim 15 wherein said call is an outgoing call from one of said plurality of stations ~~storage medium comprises a disk.~~

18. (original) The ACP as recited in Claim 15 wherein said storage medium contains a plurality of recordings arranged in directories according to a date on which said recorder created said plurality of recordings.

19. (original) The ACP as recited in Claim 15 wherein said recorder controller is an ADSI-capable device.

20. (original) The ACP as recited in Claim 15 wherein said recording is subject to overwriting on an aged basis.

21. (currently amended) A system for managing deletion of telephony recordings files stored in a storage unit, comprising:

a file structure including directories, each of said directories designated to contain only telephony recordings files created during particular periods of time; and

Ad Cont. a controller, associated with said storage unit, that recovers storage capacity in said storage unit by deleting an entire one of said directories based on said particular periods of time.

22. (currently amended) The system as recited in Claim 21 wherein said telephony recordings files are telephone conversations between two parties recordings created during said particular periods of time.

23. (original) The system as recited in Claim 21 wherein said controller deletes an oldest one of said directories.

24. (original) The system as recited in Claim 21 wherein said particular period of time is one day.

25. (original) The system as recited in Claim 21 wherein said storage unit is a disk storage unit.

26. (currently amended) The system as recited in Claim 21 wherein selected ones of said telephony recordings files are removed from one of said directories before said controller deletes said directory.

*A2
condel* 27. (currently amended) The system as recited in Claim 21 wherein said controller deletes said one of said directories by deleting said telephony recordings files contained in said directory and renaming said one.
